

Meet the Entomologist

Shelby Grice

My interests fall within the ecology, taxonomy, and systematics of insects, particularly within the order Orthoptera. I hope to bring awareness to the habitat as well as the hopping critters they hold through research and outreach opportunities at the Mississippi Entomological Museum.

Hoppy To Meet You!

A bit about me!

I am a Master's student of JoVonn Hill at Mississippi State University and a Laboratory Technician at the Mississippi Entomological Museum.

Why Did I Choose Entomology?

I have always been passionate about biology and the natural world. My career goals changed nearly every week as a child, but the common factor in all of them was a focus on the world around me and how to understand or help it.

Prairie Conservation

I have a strong interest in grassland habitats, the acreage of which is dwindling rapidly. I hope to bring awareness to the habitat as well as the hopping critters they hold through research and outreach

My interests fall within the ecology, taxonomy, and systematics of insects, particularly within the order Orthoptera. My proposed thesis seeks to revise the taxonomy of *Hesperotettix* (Orthoptera: Acrididae) while also seeking to understand the genetic differences (if any) between disjunct populations.
